The RealReal

Similar Designers

Executive Summary

Help customers find their next favorite designer.

Problem

Designer PLPs offer no clear next step when products don't resonate.

80%

of visitors leave without clicking a product.

Proposal

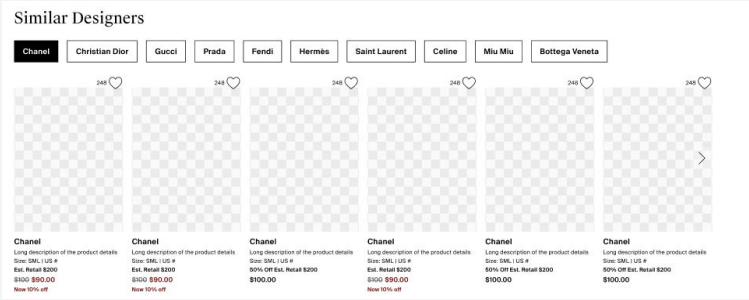

Showing related designers will promote further browsing and improve discovery.

01 / MVP: Related Designers

Recommend designers customers browse and buy together.

02 / Next: Similar Designers

Recommend designers by visual similarity, shared attributes, and customer behavior.

MVP

Related Designers

CUSTOMERS ALSO SHOP

PROBLEM

Designer PLPs offer no clear next step when the products don't resonate.

HYPOTHESIS

If we introduce related designers on Designer PLPs, then browsing and product engagement will increase, because customers will have a relevant path to continue exploring.

Platform: Web | **Start:** Sept 30

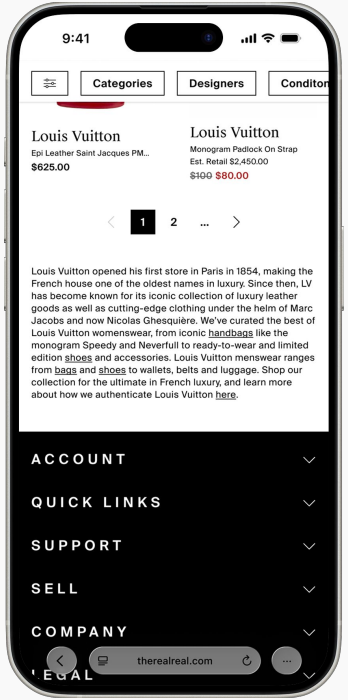

PRIMARY METRIC

Related Designer Click-Through Rate

Secondary: Designer PLPs viewed per session, PDP views after interacting with the module

MVP

Prove related designers drive exploration

Mockup / Wireframe

Strategy

Model Logic

Customers who browsed also browsed

Products

First 10 products on browse page

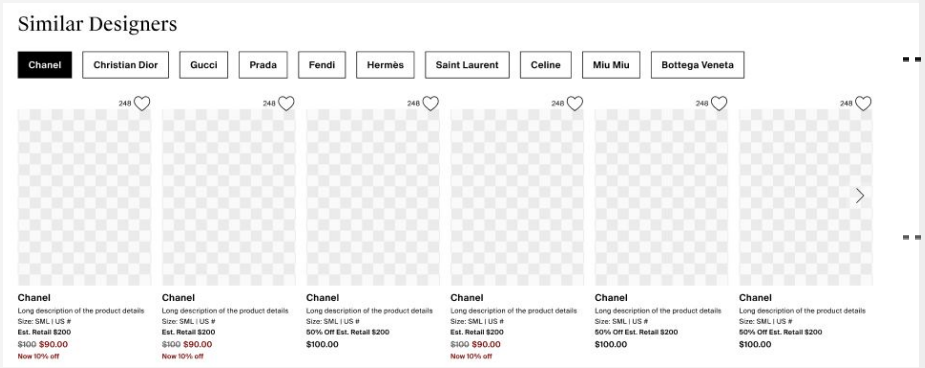

Suggested Placements

- Bottom of Designer PLP
- Mid page

Strategy

Suggest which designers to explore next.

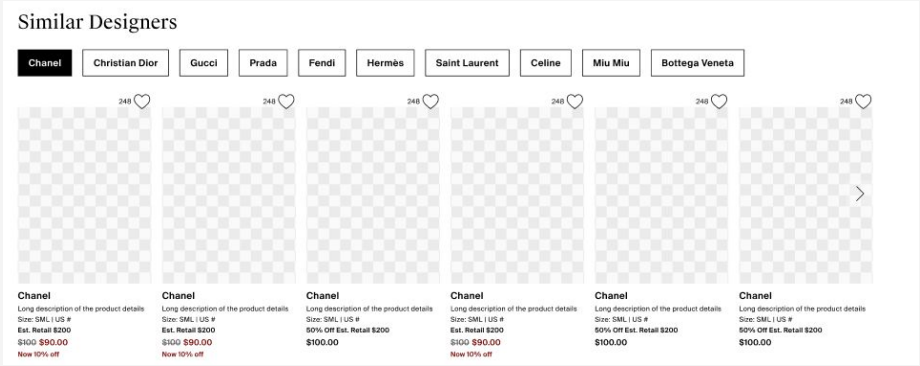

Start with designers customers browse together. Then improve which designers and products we recommend.

PHASE	Designer Recommendations	Product Recommendations
MVP Related Designers	Show designers commonly browsed together.	Show the first 10 products from each designer's browse page.
Next Similar Designers	Add more ways to recommend designers: **looks similar**, **feels similar**, and **personalized**.	Test more relevant, personalized products

Similar Designers

Strategic Roadmap

Improve recommendations over time

- ***Look*** similar: based on visual similarity
- ***Feel*** similar: based on occasion, trend, aesthetic
- **Personalized**: based on past browsing and purchases

Product Recommendations

Test Algolia against personalized recommendations using customer, shopper, and consignor behavior.

* Experiment timing and sequencing pending MVP results

Content Variants

Two Categories:

Related or similar designers to PLP:

1. Customers also shop
2. Related designers
3. Related to your search
4. More designers like this
5. Shop similar

Assumes they didn’t like items on PLP & doesn't want to shop more of the same:

1. You might like
2. Explore other options
3. Explore other designers

MVP
